PHP

PERSONAL PROJECTS

Real Estate Social site

- A web application with Django Framework. JavaScript, Html, CSS, and Machine Learning are used to implement.
- People can post and comment to buy or sell property/houses, utilizing a chat feature. Additionally, users can predict house prices in specific locations.

Electric Car Charging Station

- A modern electric car charging station management system implemented with PHP, JavaScript, MySQL.
- A dashboard displays available charging slots and the number of cars currently charging. Car owners receive a ticket upon entering the station, and a money receipt is generated after the car is fully charged.

AirMail

- A full responsive messaging mobile application developed with flutter.
- People can chat with one another. They can also share files, photos, etc. Additionally, people can play several mini-games.
